

Special Issue

New Technologies to Enable a Sustainable Vertical Farming Industry

Message from the Guest Editor

Vertical farming has been widely publicized as the farming system of the future. Increased productivity, decreased water and pesticide use, increased availability of locally grown and fresh food, increased employment opportunities, and production of food crops in harsh environments are some of the advantages of vertical farming.

This Special Issue will focus on “New Technologies to Enable a Sustainable Vertical Farming Industry”. The issue is intended to cover a wide range of topics related to increasing resource-use efficiency, productivity, crop value, and profits in vertical farming. These include optimizing the growth environment, maximizing crop yield, monitoring or modeling crop growth and physiology, novel production systems, increasing food safety, and enriching phytochemicals in crops. We welcome original research articles, reviews, and opinion letters.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston
