

Special Issue

Sustainable Agronomic Strategies for Enhancing Tomatoes Yield and Nutritional Quality

Message from the Guest Editors

With the availability of innovative agronomic techniques and inputs such as organic fertilizers and biostimulant, there are different research groups around the world that have generated a massive amount of data useful for yield and quality improvement of tomatoes. However, the current challenge is to valorize this knowledge in real farming systems: when properly integrated and deployed, the novel information is expected to make the tomato cultivation more sustainable. In this view, the present Special Issue focuses on the agronomic innovations expected to improve tomato yield and quality in the future. We particularly encourage articles dealing with improved plant materials, innovative fertilizers, biostimulants, digital/precision management and their application in tomato production. We look forward to your precious contributions.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
