

Special Issue

Weed Management and Pesticide Application Technology

Message from the Guest Editors

Today, more than 3,000,000 ton of pesticides are produced annually around the globe. Making sure pesticides are applied in an efficacious yet safe manner is critical for the crop protection industry. In order to do that, it is critical to develop innovative methods for pesticide applications and weed management. This Special Issue of *Agronomy* will focus on innovative research to optimize pesticide applications and weed management. We are asking that you consider publishing the innovative research that you have done in the areas of improving the environmental sustainability of pesticide applications, innovative methods for applying pesticides, use of chemistry to modify the activity of pesticide applications, and the use of alternative pest management strategies to improve crop production for the future. Pesticide applications are undeniably important to help to ensure the future demands for food, fuel, and fiber are met, but the finesse and mastery of the applicator need to be met with new and novel tools and techniques.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
