

Special Issue

Applied Research and Extension in Agronomic Soil Fertility Series II

Message from the Guest Editors

According to United Nations estimates, the world's population is expected to reach 9.7 billion by 2050. In order to meet the growing world population's demand for food, we need more effective agricultural management practices to achieve sustainable agricultural development in order to produce more grain with higher soil fertility and lower environmental costs. We welcome research that is focused on the production of field crops and physical, chemical, and biological changes in the agricultural soil caused by fertilization, soil improvement, tillage (including no-tillage, reduced-tillage, and direct drilling), irrigation and drainage, and crop rotations. Moreover, cutting-edge research is welcome on soil carbon sequestration and the establishment of healthy agricultural soil through various field management measures. We welcome submissions of papers related to crop production and the improvement of agricultural soil fertility.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
