Resistance and Tolerance Mechanisms to Crop Diseases and Their Effect on Grain Yield, Nitrogen Dynamics and Quality Traits

Message from the Guest Editors

Disease tolerance and resistance are two interconnected but distinct defense mechanisms that plants use to combat diseases caused by pathogens. Disease tolerance involves reducing the negative impacts of a pathogen on crop yield and quality. It is complex and may involve several factors operating at different levels to maintain yield performance in the presence of disease symptoms, while disease resistance entails the active prevention of pathogen colonization of the plant. Both mechanisms involve intricate genetic and molecular pathways that can be manipulated to improve plant health and productivity. In this Special Issue, we invite original research and reviews describing the current state of our understanding of disease tolerance and resistance. Studies reporting on different approaches including the epidemiology, ecophysiology, and genetic and molecular mechanisms involved in disease tolerance and resistance, as well as the potential applications of this knowledge in plant breeding and biotechnology to develop more resistant and tolerant crop varieties, are welcome.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
