

Special Issue

Consumption and Production Patterns for Agricultural Sustainable Development

Message from the Guest Editor

The 2030 FAO Agenda for Sustainable Development aims at feeding the world population by ensuring the development of sustainable food production systems and encouraging the consumers towards a responsible consumption. According to the Agenda, in fact, the sustainable cropping systems on the one hand have to increase productivity and production, but on the other one should reduce the negative social and environmental impacts, thanks also to a sustainable change in consumers' choices. Therefore, this Special Issue is open for latest research findings dealing with (at least one of) the three dimensions of agricultural sustainable development: the environmental, social and economic. In particular are invited submissions on the following topics: (1) the adoption of sustainable production patterns in agriculture sector; (2) the study of consumers' behaviour towards sustainable food products.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
