

Special Issue

Natural Compounds as Bioherbicide for an Eco-Friendly Agriculture

Message from the Guest Editors

Natural or natural-like molecules could represent a valid alternative strategy for weed management in the framework of sustainable agriculture and integrated weed management. Further, the diversity of molecular structures from living sources should provide novel chemical skeletons or templates that are unlikely to be produced by traditional herbicide synthesis programs. This Special Issue is mainly focused on, but not restricted to: - Allelopathy; - Isolation and identification of natural compounds from plants with biological activity against weeds; - Identification of the target and mode of action of pure natural molecules and/or mixtures on weed/pest physiology and metabolism; - Use of natural products as repellent/attractive agents against parasitic weeds (e.g., *Cuscuta* sp., *Orobanch* sp., *Striga* sp., etc.); - Use of allelopathic crops in crop rotation; - Use of essential oils for weed management; - Synthesis of ecofriendly natural-like compounds with biological activity against weeds; - New formulations for weed management.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
