

Special Issue

Genetic Resources, Quality and Stress Tolerance of Cucurbitaceae Crops

Message from the Guest Editors

The Cucurbitaceae family, also known as the gourd family, possesses many economically important species, such as cucumber, melon, watermelon, calabash, squash, and pumpkin. Since the first sequenced vegetable genome of cucumber in 2009, the rapid development of technologies such as high-throughput sequencing is boosting the research on a number of areas in cucurbits. The scope of this Special Issue is to bring together cutting-edge full research articles regarding the advances in scientific areas related to the genetic resources, quality, and stress tolerance of cucurbit species.

Guest Editors

Prof. Dr. Jinfeng Chen

Dr. Xiaqing Yu

Dr. Biao Jiang

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
