

Special Issue

Conservation Management Practices for Improving the Ecological Health of Pasture

Message from the Guest Editors

Although pasture ecosystem protection around the world has demonstrated some achievements in the past, severe problems remain, such as the vulnerability of the natural environment, a huge ecological deficit, severe degradation, and functional decline. To achieve a better understanding of how to improve the ecological health of pastures, there are numerous challenges relating to the future development of pasture ecosystems that also require attention. These include, for example, pasture soil and plant changes, global climate change, and the relationship between economic development and pasture production. This Special Issue invites original research articles, opinion papers, and short communications on the following topics:

- Evaluation of pasture ecological health.
- Status quo of different types of pasture.
- Element trade-offs in the pasture ecosystem.
- Livestock grazing in pasture ecosystem.
- Climate change and carbon-neutral in pasture ecosystem.
- Economic development and pasture production.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
