

Special Issue

Global Threat to Agriculture from Invasive Alien Plants

Message from the Guest Editor

In the general and planetary problem of the progressive loss of specific and ecosystem biodiversity, the issue of the impact of alien species, especially invasive alien species, is of great importance. In agricultural contexts, the impact of alien species occurs not only in terms of loss of biodiversity, replacing native species and simplifying complex ecosystems, but also causing significant damage to crops and their productivity.

The aim of this Special Issue is to collect original research addressed by different disciplines and carried out in different areas of the Earth. These studies may concern: the impact of alien species in pastures and in different herbaceous and arboreal crops, the identification of protocols for their census and their monitoring, the identification of solutions for their containment or elimination. Sustainable solutions, which are compatible with environmental and human health.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
