

Special Issue

Living Soils: The Role of Microorganisms in Heterogeneous Soil Microenvironments

Message from the Guest Editors

The balanced diversity of soil microorganisms is closely associated with soil health due to the diversity and activity of soil microorganisms. In addition, many studies have indicated that soil microbes can be used as biological fertilizers and/or soil improvers. In this issue, we aim to summarize and present the role of microorganisms in heterogeneous soil microenvironments and also in bottom sediments, the importance of biodiversity of soil microorganisms, and their contribution to the improvement of soil health. This Special Issue is dedicated to increasing knowledge about gene pool microorganisms in soils, participation of microorganisms in the circulation of elements, humus formation, as well as production of substances stimulating plant growth. An important aspect of this Special Issue will be to present the use of modern techniques to analyze the structure, functions, and interactions of soil microbial communities.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
