

## Special Issue

# Mulching Films in Arable Cropping Systems

### Message from the Guest Editor

Agricultural film mulches have long been used in the production of high-value horticultural crops; however, a much more recent application has been their use in arable cropping systems of pulses, fibre crops, oilseeds, and cereals. The use of film mulches in arable cropping systems has the potential to reduce soil evaporative losses, reduce weed pressures, and allow for the early sowing of soil temperature sensitive crops. However, concerns remain around the risks of soil and water pollution with plastics, additives and their degradation compounds, and the likelihood that they might enter the food chain. The aim of this Special Issue is to compile the most recent advances in the use of mulching films in crops such as summer and winter cereals, fibre crops, oilseeds, and pulses. Original research articles are requested that address benefits and trade-offs of the practice and the way forward, particularly in the use of bioplastics and biodegradable mulches.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
