

Special Issue

Ozone Pollution Influence on Crops Biology and Yield

Message from the Guest Editor

The present Special Issue aims at hosting relevant, high-quality papers dealing with the effects of photochemical air pollution on the biology of crops, including food crops, floriculture, fruit trees, and industrial crops, from the molecular, biochemical, physiological and agronomical points of view. Room will be also available for papers dealing with neglected and underutilized crops or crop wild relatives. Papers dealing with ozone stress in combination with other sources of biotic or abiotic stress will be mostly welcome, and the same will apply for studies concerning research topics given scanty attention so far, such as the interaction between the presence of excess O₃ in the troposphere and the chemical and biochemical processes occurring in the soil.

Guest Editor

Dr. Maurizio Badiani

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
