

Special Issue

Integrated Pest and Disease Management of Mushrooms and Vegetable Crops

Message from the Guest Editors

This Special Issue will offer comprehensive coverage of the general principles and advances to fight pests (flies, nematodes or mites) and diseases in mushroom and horticultural crops. The topic includes incidence, identification and pathogenicity of novel agricultural pests and diseases, mechanisms of parasitic action including molecular tools, pest and disease ecology and measurements of control such as the implementation of integrated pest and disease management programs with the inclusion of biocontrol strategies. In addition, breeding programs for new resistant crop varieties are also welcome. We look forward to your review article, original research article, or short communication for this Special Issue.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
