Using Our Agrobiodiversity: Plant-Based Solutions to Feed the World

Message from the Guest Editor

We invite contributions on specific examples, lesser-known and underutilised crops, of how an emphasis on agricultural biodiversity can provide the basis for a nutritional, reliable, culinary, and sustainable food production, and analyse the advantages, limitations, and risks of an increased focus on agrobiodiversity. The main justification for choosing this topic of focus is based on the conclusion that the potential for approaches based on the preservation and development of existing agrobiodiversity has not been given sufficient attention in the current scientific and political debates concerning the best strategy to keep up with the rate of global population growth, the impact of climate change, and the increasing demand for food. An emphasis on agrobiodiversity will be the basis for the most appropriate strategies if the goal is to feed the entire world in the twenty-first century.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
