

Special Issue

Air and Soil Pollution Effects on Agroecosystems

Message from the Guest Editor

This *Special Issue* intends to collect papers investigating the effects of various air and soil pollutants (chemical and physical agents) on the structure and ultrastructure of crop plants (histological, cellular, and micromorphological modifications), and on their biochemical and physiological processes. Additionally, papers dealing with the content of heavy metals in crop plants (especially in parts of the plant intended for human or animal consumption), the influence of pollutants on secondary species in agroecosystems (such as pollinators and pests), and pollution sources for agroecosystems are welcome.

Guest Editor

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief
