Soil Fertility Management in Cropping Systems: Today's and Future Perspectives—Series II

Message from the Guest Editors

Soil fertility is the key expression of soil ability to support plant nutrient needs. In cultivated systems, this concept takes great importance. Indeed, the constant increase in the world population, the decrease in arable land, the processes of desertification and soil erosion, the climate crisis, and the growing demand for food security and safety are the main factors impacting the fertility of the world's soil. For these reasons, soil fertility management in cultivated systems requires major attention from the scientific community and farmers. This Special Issue aims to host cutting-edge research or review articles that highlight how research and agronomic techniques both today and in the future will be able to give answers to these challenges in different countries. We believe that only with "more research per hectare" will we be able to give concrete answers to the challenges that await us.

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Prof. Dr. Leslie A. Weston

Gulbali Centre for Agriculture, Water and Environment Research,
Charles Sturt University, Wagga Wagga, NSW 2678, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
