

## Special Issue

# Spraying and Pollination Systems in Precision Agriculture

### Message from the Guest Editor

Spraying and pollination are important to guarantee crop yield and quality. More than 85% of main crops rely on spraying and insect pollination, which increase their yields by more than 10%. At present, spraying and insect pollination are facing separately serious problems such as pesticide waste, environmental pollution, food safety, and the sharp decline in the number of pollinating insects. Multi-technology integration, such as air-assisted spraying, pesticide adjuvant, electrostatic spraying, target spraying, and variable spraying, is the current developmental trend. Swarm pollination and mechanized pollination, with the support of intelligent technology, are becoming effective means to alleviate the crisis of pollinating insects. These also provide a good foundation for demanding precision agriculture. This Special Issue, entitled *Spraying and Pollination in Precision Agriculture*, welcomes new research, comments, and opinion articles covering all relevant topics, including pest and disease detection, efficient pesticide spray, intelligent swarm management, efficient pollen application and other schemes, modeling, applied research, and policy positions.

## About the Journal

### Message from the Editor-in-Chief

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

*Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

#### Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
