

Special Issue

Strategies for the Control of Fusarium Head Blight in Cereals

Message from the Guest Editor

In this Special Issue, we welcome original research, reviews, and opinions on recent advances in strategies for the control of Fusarium head blight, which is one of the biggest concerns in cereal health. Are there any useful ways of inoculum monitoring to detect *Fusarium* pathogens at the earliest possible point? Of determining cultivars resistant to the disease and tools supporting resistance breeding? Of developing useful decision support systems? Of discovering means of disease control with agrotechnologies? In this Special Issue, we are interested in preventing grain losses, but we are also interested in ensuring that the rescued yield is free from mycotoxins. Prof. Dr. Malgorzata Jedryczka

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
