

Special Issue

Viticulture and Winemaking under Climate Change

Message from the Guest Editor

The importance of viticulture and of the winemaking socio-economic sector is largely acknowledged for many regions worldwide. The most famous winemaking regions show specific environmental characteristics, where climate usually plays a key role. Recent-past trends already point to a pronounced increase in the growing season mean temperatures, as well as changes on the precipitation regimes, which has been influencing wine typicity across some of the most renowned winemaking regions worldwide. Moreover, several climate scenarios give evidence for enhanced stress conditions for grapevine growth until the end of the century. Although grapevines have a high resilience, the clear evidence for climate change in the upcoming decades urges adaptation and mitigation measures to be taken by the sector stakeholders. This Special Issue of *Agronomy* welcomes articles related to the field of climate and climate change impacts on viticulture and winemaking, including the assessment of potential adaptation measures against these threats. Field trials and/or modelling approaches (crop or climate modelling) are also valuable contributions. Dr. Helder Fraga

About the Journal

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet.

Agronomy is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Agronomy) / CiteScore - Q1 (Agronomy and Crop Science)
