Supervised and Unsupervised Classification Algorithms

Message from the Guest Editors

Supervised and unsupervised classification algorithms are the two main branches of machine learning methods. Supervised classification algorithms are divided into two categories: classification and regression. Unsupervised classification algorithms are divided into three categories: clustering, data estimation, and dimensionality reduction. Applications range from object detection from biomedical images and disease prediction to natural language understanding and generation. Submissions are welcome both for traditional classification problems as well as new applications. Potential topics include but are not limited to image classification, data integration, clustering approaches, feature extraction, etc.

Guest Editors

Dr. Mario Rosario Guerracino

Dr. Laura Antonelli

Dr. Pietro Hiram Guzzi

About the Journal

Message from the Editor-in-Chief

Algorithms are the very core of Computer Science. The whole area has been considered from quite different perspectives, having led to the development of many sub-communities: Complexity theory (limitations), approximation or parameterized algorithms (types of problems), geometric algorithms (subject area), metaheuristics, algorithm engineering, medical imaging (applications), indicates the range of perspectives. Our journal welcomes submissions written from any of these perspectives, so that it may become a forum for exchange of ideas between the corresponding scientific subcommunities.

Editor-in-Chief

Prof. Dr. Frank Werner

Faculty of Mathematics, Otto-von-Guericke-University, P.O. Box 4120,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Theory and Methods) /
CiteScore - Q1 (Numerical Analysis)
