

Special Issue

Nature-Inspired Algorithms in Machine Learning

Message from the Guest Editors

We cordially invite you to submit your papers to the Special Issue “Nature-Inspired Clustering Algorithm” of *Algorithms*, an established MDPI journal indexed—among others—in Clarivate Web of Science and Scopus. Data clustering constitutes one of the most challenging tasks of data science. Due to its unsupervised nature, it represents the essence of knowledge discovery from data. Nature-inspired algorithms are used in this area due to the complexity of the clustering task and the possibility of including additional grouping factors into the algorithm’s scheme. Our Special Issue will accept a broad range of new advances in the field of nature-inspired clustering algorithms. We invite contributions describing new techniques, novel clusters of representations and evaluation criteria, as well as papers dealing with specific variants of clustering and challenges of Big Data. A limited number of state-of-art reviews will also be considered for publication. Please feel free to contribute as well as to contact us with any questions and concerns.

About the Journal

Message from the Editor-in-Chief

Algorithms are the core of computational mathematics and computer science. The whole area has been considered from different perspectives, which has led to the development of several sub-communities. The aim is to bring together researchers and practitioners from different areas of computational mathematics and computer science and to offer a platform for interdisciplinary applications in different areas of science and technology. In this way, *Algorithms* may become a forum for the exchange of new stimulating ideas between the different sub-communities working in the area of algorithms and their applications and the presentation of high-quality novel algorithmic approaches.

Editor-in-Chief

Prof. Dr. Frank Werner

Faculty of Mathematics, Otto-von-Guericke-University Magdeburg, P.O.
Box 4120, D-39016 Magdeburg, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Theory and Methods) /
CiteScore - Q1 (Numerical Analysis)
