Special Issue

Recent Progress in Neurosurgery and Neuroanatomy Research

Message from the Guest Editor

Over the last two decades, significant progress in the treatment of neurological pathologies has been observed, particularly regarding endovascular arterial and venous interventions, in addition to other neurosurgical procedures. This progress would not be possible without simultaneous research in the field of neuroanatomy. All invasive treatments within the central nervous system need extensive anatomical knowledge, especially regarding anatomical variability. We invite authors who investigate neuroanatomical problems that could be applied in the clinical setting to submit their papers to this Special Issue of the journal *Anatomy*. Neuroimaging and clinical studies are especially welcome. This Special Issue will accept both original research articles and reviews. Submission of case studies describing relevant anatomical problems is also encouraged.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Francesco Fornai
Department of Translational Research and New Technologies in
Medicine and Surgery, University of Pisa, 56124 Pisa, Italy

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid
by authors or their institutions.

Rapid Publication:
manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.1 days after
submission; acceptance to publication is undertaken in 5.7
days (median values for papers published in this journal in
the second half of 2025).

Recognition of Reviewers:
APC discount vouchers, optional signed peer review, and
reviewer names published annually in the journal.
