Message from the Guest Editors

Bat species around the world face multiple stressors, such as climate change, disease and wind energy, that can have population-level impacts. However, it can be difficult to quantify the impact of these stressors on bats because they are a cryptic species. Thus, innovative approaches are necessary to collect and analyze data to understand the population status and trends of bats, and inform conservation decisions. These approaches include genomics research, the use of advanced technologies and new systematic sampling frameworks for field data collection.

This Special Issue focuses on the methodological and analytical approaches used to study bat populations. These approaches can provide new insights into the status and trends for colonial or solitary roosting species. We invite original research papers and reviews addressing field and laboratory methods to quantify the bat population status and trends.

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2024, ranks 15/86 (Q1) in 'Agriculture, Dairy & Animal Science'; 21/170 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank: JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
