### Message from the Guest Editors

Dear Colleagues,

Global climate change will affect many aspects including animal behavior, physiology, and ecology. Animals have the ability to sense the signals of climate change of their living habitats and environments and can adjust their adaptive changes in morphology, behavior, physiology, and ecology to cope with the environmental changes.

This special issue focuses on the adaptive responses to climate change in vertebrates, and we welcome related papers from the gene, molecular, physiological, behavioral, morphological, and ecological levels.

Deadline for manuscript  
submissions:

**closed (25 December 2023)**
