#### Message from the Guest Editor

Dear Colleagues,

Methane has a strong greenhouse effect. The mitigation of methane production by ruminants has been a subject of intensive research.

The reduction of enteric methanogenesis can usually be achieved by manipulating ruminants' diet (including changing dietary composition, using anti-methanogenic feed sources or adding anti-methanogenic additives). As rumen microbial communities related with the methanogenesis (methanogenic archaea, eubacteria, protozoa, fungi) and their activity are affected by host dietary changes, the enteric methane production is then reduced. Nevertheless, the host's genetic background may also influence the enteric methanogenesis by interacting with the rumen microbiota, which in turn may affect the success of the rumen manipulation to mitigate the emission of methane by the host.

This Special Issue aims to present recent research advances on the exploration of rumen manipulation strategies to reduce the enteric methane emissions by ruminants. Studies reporting the influence of the host genetic background on rumen methanogenesis are also of interest.

Keywords: ruminants; enteric methane; rumen microbiota; methanogenesis; hospitelics **Specials**

1. Institute of Veterinary Medicine and Animal Sciences, Estonian University of Life Sciences, Kreutzwaldi 1, 51014 Tartu, Estonia 2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia Animals is an on-line open access journal that was first published in 2011. Animals adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. Animals is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 3.0 (2022, ranks 12 /62 (Q1) in 'Agriculture, Dairy & Animal Science'; 13/143 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases. **Journal Rank:** JCR - Q1 (*Veterinary Sciences*) / CiteScore - Q1 (*General Veterinary*)
