Sports Medicine and Animal Rehabilitation

Message from the Guest Editor

Dear Colleagues,

Mobility issues are a well known problem in veterinary medicine. Detecting these problems, finding a proper solution for them and getting these animals back to work can be very challenging, especially in the world of canine and equine athletics.

The scope of this Special Issue is to publish advances in Sports Medicine and Rehabilitation research, both in the Small Animal, as in the Equine field. This includes novel techniques for lameness detection on the one hand and the results of specific rehabilitation schemes and techniques on the other.

Specific tests and therapies developed for professional sports often find their way to the general population as well, but this goes both ways! So if any of you feel that you have something to share that might revolutionize the diagnosis and/or treatment of mobility problems, this is the Special Issue to publish it in.
