Molecular Mechanism and Nutritional Regulation in Porcine Diarrhea

Guest Editor:

Dr. Kwang-won Seo

College of Veterinary Medicine, Chungbuk National University, Cheongju 28644, Republic of Korea

Deadline for manuscript submissions: **31 July 2024**

Message from the Guest Editor

Dear Colleagues,

Diarrhea is one of the most serious threats in porcine and results in substantial economic losses to the porcine industry worldwide. Accumulating evidence has revealed that porcine diarrhea is known to become more severe when the imbalance between nutrition regulation and microbiome becomes severe. In particular, the microbiome performs crucial functions in pigs, such as the maintenance of host physiological homeostasis, the promotion of immune system development, the regulation of host metabolism, and influencing host health. Meanwhile, intestinal microbiota interact with the host in the metabolism of dietary nutrients. In pig production, nutrition regulation is one of the most important approaches to improving growth, health, and meat quality.

Animals is an on-line open access journal that was first published in 2011. Animals adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. Animals is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 3.0 (2022, ranks 12 /62 (Q1) in 'Agriculture, Dairy & Animal Science'; 13/143 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases. **Journal Rank:** JCR - Q1 (*Veterinary Sciences*) / CiteScore - Q1 (*General Veterinary*)
