Dear Colleagues,

Horses are elite athletes with significant oxygen and nutritional demands to support their metabolic needs. Thus, maximum performance depends on the integrated and coordinated functioning of a set of body systems, and in most cases, peak performance requires these body systems to operate at or near their maximum capacity. Thorough knowledge of acute and chronical adaptations to exercise is essential to hone the athletes' capacity and to minimize nefarious impacts on equine welfare. Furthermore, nutritional needs must be met in order to ensure energy, muscle gain and recovery, whilst preventing fatigue and reducing the side effects of exercise-induced inflammation.

In order to improve athletic performance whilst ensuring welfare and an individualized medical care, further highquality research on exercise physiology and nutrition, across all breeds and equestrian disciplines, is of utmost importance.

As such, we would like to invite you to share your recent findings in the Special Issue "Equine Exercise Physiology and Feeding Management: How to Maintain Energy Balance".

1. Institute of Veterinary Medicine and Animal Sciences, Estonian University of Life Sciences, Kreutzwaldi 1, 51014 Tartu, Estonia 2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia Animals is an on-line open access journal that was first published in 2011. Animals adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. Animals is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 3.0 (2022, ranks 12 /62 (Q1) in 'Agriculture, Dairy & Animal Science'; 13/143 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2
