# Nutritional Strategies to Control Enteric Methane Production of Ruminants

Guest Editors:

**Dr. Francisco J. Solorio-Sanchez**
Department of Animal Nutrition and Environment, University of Yucatan, Merida, Yucatan, Mexico

**Dr. Juan Carlos Ku-Vera**
Laboratory of Climate Change and Livestock Production, Faculty of Veterinary Medicine and Animal Science, University of Yucatan, C.P., Merida 97100, Mexico

Deadline for manuscript submissions:
**closed (31 October 2023)**

## Message from the Guest Editors

Dear Colleagues,

Ruminants are one of the main sources of animal protein (milk and meat) in the world; their diet is based mainly on grass forage. However, conventionally ruminant production systems draw heavily on natural resources and, if not sustainably managed, can contribute to the degradation and environmental pollution of detrimental ecosystems, mainly through methane emissions. Currently, numerous abatement measures are available to mitigate enteric methane emission. Improving feed quality is expected to reduce enteric methane production per unit of milk or meat produced. Improving feed quality can be achieved through improved grassland management, improved pasture species, and the use of locally available supplements. In addition, the use of local resources can reduce pressure on natural resources and competition for grains and cereals. Therefore, there is an urgent need to increase food production and to reach environmental objectives while preserving the health of our ecosystems.

## Editor-in-Chief

**Prof. Dr. Clive J. C. Phillips**

1. Institute of Veterinary Medicine and Animal Sciences, Estonian University of Life Sciences, Kreutzwaldi 1, 51014 Tartu, Estonia
2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia

## Message from the Editor-in-Chief

*Animals* is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 3.0 (2022, ranks 12 /62 (Q1) in 'Agriculture, Dairy & Animal Science'; 13/143 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.
**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.
**Journal Rank:** JCR - Q1 (*Veterinary Sciences*) / CiteScore - Q1 (*General Veterinary*)
