Message from the Guest Editors

Dear Colleagues,

This Special Issue on “Zoonoses and Wildlife—One Health Approach” invites the submission of novel research on the wildlife–human interface, including research that investigates the epidemiology of zoonotic transmission pathways, but also how land use changes, population growth, climate change, and other environmental and societal factors might increase the likelihood of spillover disease events from wildlife to humans. Under the “One Health” paradigm, a strong collaboration between veterinary and medical scientists, ecologists, social scientists, and policy makers is required to control zoonotic diseases; thus, submissions of transdisciplinary research on the wildlife–human interface are particularly welcomed.
