

Special Issue

Small Animal Clinical Pharmacology and Therapeutics

Message from the Guest Editors

Companion animals are increasingly considered as family members. The level of care and cure must be adequate for such a degree of importance. Several improvements have been recorded in the clinical practice of companion animals in recent decades both in clinical and surgery fields, and pharmacology remains a milestone of both. On the one hand, pharmacology is a science mainly related to the alteration of physiological processes; on the other hand, it is strictly related to pathological conditions and is one of the few tools that can be used to treat and cure patients. These factors are well-known by all veterinarians, and they are continuously increasing. In order to collect extensive information about the current use of veterinary medicines in pets, we invite all colleagues to submit a manuscript about their experiences, from a clinical or research point of view, within veterinary pharmacology and therapeutics.
