Emerging Trends in Non-bovine Milk and Milk Products

Message from the Guest Editor

Milk and milk products are one of the most important foods for the human people. It contains several essential constituents that are necessary to not only infant but also adult people's diet. Nowadays, appr. 80% of the total milk production of the World is cow milk. However, the importance of non-bovine milk is intensively increasing in several countries. The demand for non-bovine milk and milk products has increased over the last decades due to their high nutritional value and favorable digestibility than cow milk. We invite both original research and review articles that predominantly focus on buffalo, camel, donkey, goat, horse, sheep and yak milk and milk production. For this Special Issue, advised to the submission of manuscripts related to the breed and dietary treatments and their influence on the milk production, composition, bioactive compounds and nutritional benefits, local dairy products, udder health, milk processing characteristics, technology and breeding factors and their influence on the milk and dairy products parameters.
