

Special Issue

Additives in Fish Stress: Comparative Endocrine and Physiological Responses

Message from the Guest Editor

This Special Issue aims to collect full-length articles, review articles, and communications that present original research on the latest strategies in fish stress (Stressors, stress responses, and their impacts, etc.). The compilation will cover a range of topics, including but not limited to, the effects of different additives on stress response in fish, the impact of stressors on fish health, and the endocrine and physiological responses of fish under the action of additives, management of stress response in fish farming, the regulatory effect of feed additives on endocrine/physiological responses. This Special Issue invites contributions addressing various aspects related to the stress response. Furthermore, while the focus is primarily on fish, submissions on stress responses in other aquatic species will also be considered, valuable works on other aquatic species can also be considered.
