

## Topical Collection

# Monitoring of Cows: Management and Sustainability

### Message from the Collection Editors

Dairy production systems must provide good productivity and profitability but also demonstrate a reduced impact on the environment, good animal welfare standards, and sustainability. Within this context, the ability of dairy cattle producers to monitor the productivity, behaviour, and welfare of their animals and environment plays an important role in the whole production. Introducing dairy technology for monitoring dairy cattle and the environment enable us to precisely describe the environment and discriminate cow activities and to avoid disturbing natural behavioral expression. However, for precision dairy-monitoring technologies to increase labor and production efficiency, they must easily and accurately quantify meaningful environmental, physiological, or behavioral parameters. The aim of this Special Issue is to bring together the latest findings concerning the monitoring of cows grazing on pasture or in confinement systems.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

#### Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary )
