Application of Regenerative Medicine in the Field of Veterinary Medicine

Message from the Guest Editors

In veterinary medicine, regenerative medicine can be broadly defined as finding methods to heal, replace, and regenerate severely damaged tissues and organs, as well as pursuing methods to treat chronic diseases in animals. In this Special Issue, we aim to publish original research articles and reviews that are specifically focused on tissue regeneration, including studies on the effects of stem cell therapy, platelet-rich plasma (PRP) therapy, tissue engineering, gene therapy, and exosome therapy. In doing so, we hope to take a step closer to the development of novel alternative treatments for the management of chronic diseases in animals. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2024, ranks 15/86 (Q1) in 'Agriculture, Dairy & Animal Science'; 21/170 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Editor-in-Chief

Prof. Dr. Clive J. C. Phillips
