

# Special Issue

## Advances in Small Animal Gastroenterology

### Message from the Guest Editors

Gastrointestinal disease is a very common presentation of pets in veterinary practice, and our understanding of the unique interaction between host genetics, the mucosal immune system, luminal antigens and the microbiome is rapidly expanding. This special issue will provide authoritative evidence-based, scientific articles integrating clinical research papers, reviews, commentaries and unique case reports from international researchers and specialists embracing all aspects of gastroenterological disease in dogs and cats. It will facilitate the dissemination of the latest research and introduce new ideas and suggest research directions.
