Recent Advances in Mare Reproduction

Message from the Guest Editor

Equine reproduction holds significant economic importance, driving continuous advancements in reproductive technologies to optimize the reproductive capacity of mares. The unique reproductive characteristics of mares, including their estrous cycle, pregnancy development, and parturition, necessitate specialized veterinary approaches. Continuous evolution and improvement in reproductive techniques are essential to enhance mare reproductive performance. Mares exhibit specific reproductive pathologies that require tailored veterinary interventions, highlighting the need for a dedicated focus on mare reproductive health. Advancing knowledge in reproductive infertility is crucial, encompassing both the physiological aspects and potential therapeutic approaches for reproductive disorders. This Special Issue seeks to provide a comprehensive understanding of mare reproduction. The continuous evolution of reproductive techniques and a deeper understanding of mare reproductive health are essential for improving reproductive outcomes and addressing the specific needs of mares.

2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
