Diagnostic Strategies in Bovine Respiratory Disease

Message from the Guest Editors

Bovine respiratory disease (BRD) complex causes serious losses due to morbidity, mortality, and the related therapy of affected animals worldwide. The infectious disease agents associated with the development of BRD continue to grow as new diagnostic strategies are being implemented or conventional techniques methods are modified. We are pleased to invite you to participate in this Special issue that deals with all methods of diagnosis related to the characterization of infectious disease agents and/or the clinical diagnosis of BRD. Articles containing any of the scientific methods of diagnosis, such as clinical, all forms of laboratory diagnosis including but not limited to histopathology, bacteriology, immunohistochemistry, in situ hybridization, serology, molecular, respiratory microbiota, and new-generation sequencing, are welcome.
