

Topical Collection

Current Advances in Poultry Research

Message from the Collection Editors

In order to meet the demand associated with the increase in consumption, the poultry industry made advancements in all aspects in production including development, growth, nutrition, management, and welfare. While most of the advancements have been positive, challenges such as incidence of myopathies and leg conformity are issues the industry is facing today. The demand for poultry products does not seem to be slowing; therefore, scientists and the industry must continue to explore production practices that will optimize poultry egg and meat production. We invite original research papers that address improved management and production methods involved in the production of eggs and poultry meat. Areas of interest include embryo growth and development, nutrition, housing conditions, reproduction, myopathy origins and prevention, meat quality/further processing, and welfare/well-being.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
