Diagnostic Imaging Applied to the Internal Medicine of Ruminants

Message from the Guest Editors

The use of diagnostic imaging equipment is becoming widespread in several sectors of veterinary practice and research. Ultrasonography, radiography, and thermography are very useful tools to achieve diagnoses of diseases, and these devices can be applied in the field, hospital, and ambulatory settings. This Special Issue is specifically oriented to the description of recent advances, innovations, and applications involving diagnostic imaging techniques, and especially to the use of imaging in gastrointestinal, locomotor, respiratory, liver, thoracic, urogenital, umbilical, and mammary gland disorders of ruminants. Research articles, reviews, and single or herd clinical cases oriented to the description of recent developments, easy of use of imaging in the field, innovations, or integrated approaches between various imaging methods will be considered in this Special Issue.

2. Curtin University Sustainability Policy (CUSP) Institute, Kent St., Bentley 6102, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
