

## Special Issue

# Hematology and Transfusion Medicine in Animals

### Message from the Guest Editors

The theme of this Special Issue of *Animals* is “Hematology and Transfusion Medicine in Animals”. The study of veterinary transfusion medicine has undergone substantial changes in recent years in every aspect. Both the methods of sampling and transfusion of whole blood and blood products have been studied in depth. Furthermore, the methods of preservation of whole blood and blood product such as erythrocyte and plasma concentrates have been studied in order to increase the safety of this practice. This topic cannot be separated from the knowledge of hematology in all animals, as well as information about the characteristics of the three blood populations (RBC, WBC, and PLT) and clotting factors. Alterations related to erythrocytes, leukocytes, and platelets (i.e., anemia, thrombocytopenia, leukemia, lymphoma, myelodysplasia, congenital and acquired coagulopathy) can provide important information relating to the most suitable products to transfuse in clinical cases.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

#### Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
