Implications of Endocrine Disruptors on Wildlife Populations

Message from the Guest Editor

Endocrine disruptors are a class of environmental contaminants that interfere with the endocrine system of animals. This disruption can lead to a range of health issues in both marine and terrestrial wildlife. The endocrine system regulates vital biological processes, and its proper function is critical for the overall health of wild animals. This Special Issue, titled "Implications of Endocrine Disruptors on Wildlife Populations," aims to bring together original research and review articles on the effects of these contaminants. We are particularly interested in studies that investigate the health and physiological effects of endocrine disruptors, including their impacts on the immune system, endocrine system, and overall well-being of wildlife. We invite submissions that cover the detection of endocrine-disrupting contaminants in habitats, animal feeds, and the tissues of wild animals.

About the Journal

Message from the Editor-in-Chief

Animals is an on-line open access journal that was first published in 2011. *Animals* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues in the many varied disciplines that involve animals, with a focus on animal science, animal welfare and animal ethics. *Animals* is covered in the Science Citation Index Expanded (SCIE) in Web of Science, with the latest Impact Factor: 2.7 (2024, ranks 15/86 (Q1) in 'Agriculture, Dairy & Animal Science'; 21/170 (Q1) in 'Veterinary Sciences'), 5-Year Impact Factor: 3.2.

Editor-in-Chief

Prof. Dr. Clive J. C. Phillips

1. Curtin University Sustainable Policy (CUSP) Institute, Curtin University, Kent St., Bentley, Western Australia 6102, Australia
2. Former Foundation Professor of Animal Welfare, University of Queensland and Foundation Director, Centre for Animal Welfare and Ethics, University of Queensland, Brisbane, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
