

# Special Issue

## Welfare-Enhanced Meat Production

### Message from the Guest Editors

For decades, the beef industry has benefited from advances in genetics, nutrition, housing, management strategies, etc., in efforts to maximize WHC (selling water at the price of meat) and color. The focus of scientific literature has followed the same line. This special issue will proceed from an animal welfare point of view in which any treatment that improves animal welfare and enhances both carcass characteristics and meat quality is welcome.
