

Special Issue

Effects of Developmental Programming on Growth, Efficiency, and Metabolism of Offspring

Message from the Guest Editor

There has been an increased interest in developmental programming and its effect on growth, metabolism, and carcass characteristics; therefore, a Special Issue dedicated to this specific topic is important. This Special Issue will focus on studies evaluating how nutrition regulates developmental programming from a physiology and production perspective in ruminants. Developmental programming can happen to the mother before or during gestation, or to the offspring during early life. This Special Issue will publish papers on topics related to the “Effects of Developmental Programming on Growth, Efficiency, and Metabolism of Offspring” and will provide great visibility for the published works.
