

## Special Issue

# Current Status of Neuromuscular Disorders in Companion Animals—Case Reports

### Message from the Guest Editors

Diseases of the motor unit, which present as nervous system disorders, are uncommonly diagnosed in companion animals. Most of these diseases are poorly characterized and understood. However, when present, they may significantly compromise the qualities of life of animals and often respond poorly to empirical therapy. The proper recognition of a suspected motor unit disease is imperative to create the appropriate diagnostic and therapeutic plans for these patients and thus improve their quality of life. This Special Issue will present case reports concerning the diagnosis and treatment of neuromuscular diseases in companion animals. The aim is to improve our understanding of these obscure diseases, creating a concise, comprehensive manual for veterinary neurologists.
