

Special Issue

Current Aspects in Food Safety of Aquatic Animal Products

Message from the Guest Editors

Fishery products are among the most extensively traded food commodities in the world. The increase in fish trade and the opening of new markets could lead to various issues related to the harmonization of commercial exchanges. Freshness, hygiene, chemical and microbiological hazards, packaging, as well as traceability have to be rigorously checked to safeguard public health and ensure the quality of products. This Special Issue will focus on recent aspects of food safety of aquatic animal products, including new foodborne diseases, parasite infection, environmental contaminations by both conventional and unconventional pollutants, innovative packaging, traceability, and different regulatory aspects. We are interested in research or review articles that aim to assess these mentioned issues by the one-health approach.
