

## Special Issue

# Equine Viral Diseases and Their Preventive Management Strategies

### Message from the Guest Editors

The study of equine viral diseases has been a long-standing interest of veterinarians, horse breeders, and those engaged in horse sport and competitions worldwide. While vaccination and prevention strategies have been effective in addressing some of these diseases, others, both old and new, have emerged due to the international trade of horses or vectors spread due to climate change.

In many cases, there is a need for improved diagnostic methods and more effective forms of surveillance. We are pleased to invite you to submit articles describing and discussing the latest data on all aspects of equine viral diseases, with particular emphasis on research on their preventive management strategies. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: Clinical cases of equine viruses outbreaks; Diagnostic methods; Antiviral drug preparations; Natural methods for disease prevention; Preventive management strategies; Equine viruses phylogenetic studies.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

#### Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
