

## Special Issue

# The Role of Genetics and Breeding in Livestock Management

### Message from the Guest Editors

Genetic selection and breeding of farm animals are powerful strategies for increasing the quantity and quality of animal products, as well as animal welfare, efficiency, and sustainability of livestock production. This Special Issue calls for contributions addressing original research and comprehensive reviews related to topics focusing on but not limited to the following: the use of breeding values and genomic predictions in making selection and management decisions, the creation of selection indices and mating plans, the use of predictive analytics and AI to assist farmers in making strategic decisions, and the use of genetic selection as a tool to improve animals' resilience and adaptability to specific environments and management practices.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, Animal Science Database, CAB Abstracts, and other databases.

#### Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)
