

## Special Issue

# Novel Epidemiological Tools for Disease Control and Prevention in Food Animals

### Message from the Guest Editor

We would like to invite you to contribute a paper to be included in the Special Issue “Novel Epidemiological Tools for Disease Control and Prevention in Food Animals”. This Special Issue will focus on novel epidemiological tools to rapidly identify, contain, and predict diseases in food animals. We aim to find applicable tools to improve the economy; reduce contamination and waste; reduce the spread of disease between animals, humans and the environment; and enhance animal welfare. The issue will build from the existing literature to enhance the applicability of methods in the field. We hope that you accept this offer and help us build a Special Issue that will enhance animal production and welfare. Your valuable contribution will be deeply appreciated.
